SELECTED SOFTWARE PROJECTS

EnglishChunks.guru — AI speaking coach in production

- Shipped a full-stack Next.js subscription product with daily A1–C2 lessons, pronunciation scoring, writing feedback, streaks and progress charts.
- Designed a privacy-first DigitalOcean speech pipeline using Silero VAD, NVIDIA Parakeet and wav2vec2; recordings never reach a third-party AI API and are deleted after scoring.
- Automated content quality with open models while preserving human review through an admin moderation queue.

Nelson — full-stack personal budget product

- Modeled expected payments as individual buckets with live balances, forecast-versus-actual reporting, projections and threshold alerts.
- Built the Express 5, Prisma 7 and PostgreSQL backend with authentication and runtime validation; audited WCAG 2.2 AA behavior at three viewport sizes.

FX Checker — tested currency intelligence interface

- Built live conversion, five-year rate history, multi-currency compare, favorites, shareable URLs, CSV export and offline fallback.
- Verified behavior with 121 Vitest and React Testing Library tests; earned a 100 Lighthouse accessibility score.

IdiomsMasterGirl — local-first AI tutor

- Runs Gemma and faster-whisper locally so voice data remains on the user’s laptop; identifies missed words and provides specific feedback.

EXPERIENCE

Full-Stack Software Engineer · Independent Products
San Francisco, CA — 2026 — Present

- Build and deploy full-stack products with Next.js, React, TypeScript, Node.js/Express, Python and PostgreSQL.
- Use open models and LLM APIs for speech, feedback and workflow automation; lead architecture, agent orchestration, review and testing.
- Work spec-first, moving from constitution and requirements through plan, tasks, implementation and verification.
